

RAG System — Q&A Test Plan

A ready-to-run validation script for docs/sample_test_document.pdf, covering both retrieval accuracy (answerable questions) and hallucination prevention (deliberately unanswerable questions).

How to run this test

- 1 Start the backend: `uvicorn backend.main:app --reload --port 8000`
- 2 Start the frontend: `streamlit run frontend/streamlit_app.py`
- 3 Create a fresh knowledge base/namespace (e.g. qa-test) so results aren't mixed with other documents.
- 4 Upload docs/sample_test_document.pdf with default settings (chunk size 800, overlap 120, top-k 5, similarity threshold 0.35).
- 5 Ask each question below in order and record what the system actually returns in the “Actual answer / behavior” column, then mark Pass or Fail against the expected outcome.

Note: Questions 9 and 10 are intentionally NOT answerable from the document. The correct, non-hallucinating behavior is the exact refusal sentence “The answer is not available in the provided document.” with no sources listed. If the system instead invents an answer for either of these, that is a hallucination-prevention failure worth noting in your report.

Test questions and expected outcomes

#	Question	Expected source page	Expected outcome
1	Who are the parties to this agreement?	1	Names Acme Corporation and Jordan Lee
2	What is the length of the probationary period?	1	90 days
3	What is the employee's annual base salary?	2	\$85,000
4	How many paid vacation days does the employee accrue per year?	2	15 days
5	What is the required notice period to terminate the agreement?	3	30 days written notice
6	What is the maximum severance pay the employee can receive?	3	12 weeks
7	How long does the confidentiality obligation last after termination?	4	2 years
8	What is the duration of the non-compete restriction?	4	6 months
9	What is the employee's home address?	—	Refusal message (not in the document)
10	Who is the company's Chief Executive Officer?	—	Refusal message (not in the document)

Results — fill this in while testing your running system

Scoring guide for your report: Questions 1–8 passing demonstrates retrieval accuracy (20% of the rubric). Questions 9–10 correctly refusing demonstrates hallucination prevention (15% of the rubric). If any of 1–8 return the refusal message incorrectly, try lowering the similarity threshold slightly; if 9 or 10 return a fabricated answer, that is a genuine bug worth investigating before submission.
